- Unique offering; no competitors offer a pedestal specifically designed for outdoor use
- SMaaS platform compatible
 - Connects to SMaaS for device management and loss prevention analytics
 - Get connected and get an extended Synergy warranty –total of 72 months!

Synergy 2.5m Outdoor ABS Pedestal

What is an Ingress Rating?

IP Ratings

A product that has a rating of IP44 means that it is protected against solid objects that are bigger than 1mm and water splashing from all directions.

When considering a purchase, it is important to know if a pedestal can be used in an intended environment. Therefore, a standard like the IP code is extremely important for the buyer.

An IP rating tells you the level of protection a device offers against solids and liquids. The “IP” stands for Ingress Protection (or International Protection) and is followed by two numbers.

The first number indicates the level of protection against solid particles (dust, dirt...) and ranges from one to six.

The second number tells you how much water a device can handle without suffering damage and ranges from one to eight — the higher the number the better the protection.
